EDUCATION

BACHELOR OF SOFTWARE ENGINEERING
Foundation University
2021-2025 CGPA 3.41

Electives:

- Programming
- Software Development
- Software Design
- Software Re-Engineering

Expertise

Python Programming

Deep Learning(YOLO v8)

Prompt Engineering

Cursor AI

SKILLS

Python Programming

Prompt Engineer

SCADA Screen Design

Cursor AI

Database

NLP

Deep learning

LANGUAGES

English (Fluent Speaker)

PROFESSIONAL EXPERIENCE

Sideline Technologies

Full-Stack AI Prompt Engineer / Jun 2025 – current

- Enabled the team in AI prompt engineering, significantly boosting productivity by leveraging AI-driven applications
- Developed cross-platform mobile (iOS & Android) and web applications using modern AI-assisted development tools.
- Utilized AI tools such as Cursor, Claude Code, and Trae AI to accelerate development, optimize workflows, and enhance software quality.

ReactiveSpace

Prompt Engineer / April 2025 – May 2025

Worked as a Prompt Engineer automating workflows with Cursor AI.

- Developed the Kani Framework Application using Next.js, Typescript, React, and Tailwind CSS integrated with Cursor AI.
- Created an NLP-based Chabot for outbound campaigns using Cursor AI, improving client communication flow and automation.

Dataventiv

Python Developer / July 2024 – Sep 2024 Internship

Worked as a Python Developer. Providing my expertise in Industrial Automation and Software Development

- Developed a Python-based Modbus simulator for testing and automation using chatgpt.
- Created SCADA UI using Ignition Perspective to optimize system monitoring.
- Implemented new features and enhanced existing functionalities using Ignition Perspective.

PERSONAL PROJECTS

Face Recognition Attendance System

Tools and Technology: Python, OpenCV, Excel, Tkinter, MySQL

- Built a face recognition attendance system using Python and OpenCV for automating student attendance.
- Integrated Cursor AI to develop a lightweight, interactive dashboard UI.
- Implemented real-time detection and recognition to record attendance with entry logs.
- Applied CRUD operations for student records and data upload.
- Ensured data integrity by recording only once per session.
- Utilized ChatGPT through Cursor AI for generating user documentation and assistant scripts.

Autopilot Pro: Traffic Light Interpretation and Pedestrian Detection for Autonomous Vehicles

Tools and Technology Python, Deep Learning(YOLO v8)

- Developed Autopilot Pro, an AI-based traffic sign and pedestrian detection system.
- Used YOLO v8 for high-accuracy object detection and built custom datasets.
- Added web scraping scripts with ChatGPT support to collect traffic sign images.
- Integrated Cursor AI to create an interactive UI for real-time detection feedback.
- Focused on use cases including:
  - Traffic sign interpretation
  - Signal recognition and pedestrian detection
  - Vehicle type differentiation (LTV/HTV)
