

M. SHARJEEL SALEEM

AI-Native Full-Stack Engineer | Generative AI & LLM Engineer | AI Automation Developer

+92 332 5760344 | sharry00010@gmail.com | [linkedin.com/in/msharjeelsaleem](https://www.linkedin.com/in/msharjeelsaleem) | muhammad-sharjeel-portfolio.netlify.app | Islamabad, Pakistan

PROFESSIONAL SUMMARY

AI-Native Full-Stack Engineer and AI Automation Developer shipping production Generative AI, LLM, and agentic systems across web, mobile, and business-automation workflows. Architect of prompt pipelines, RAG systems, multi-agent orchestrations, and third-party tool automations using OpenAI GPT-4, Anthropic Claude, n8n, Cursor, and Claude Code, accelerating delivery timelines by up to 40%. Strong Python + TypeScript foundations with deep prompt engineering, RAG, computer vision (YOLO v8), and workflow-automation skills.

CORE SKILLS

Generative AI & LLMs: LLMs, Generative AI, RAG, Agentic AI Workflows, Multi-Agent Orchestration, Vector Embeddings, Fine-Tuning, MCP, Prompt Engineering (CoT, Few-Shot, Tool/Function Calling, Structured Outputs, Guardrails, Eval)

AI Platforms & APIs: OpenAI GPT-4/4o, Anthropic Claude, Hugging Face, LangChain, LlamaIndex, Pinecone, ChromaDB, Pydantic AI

Languages & Frameworks: Python, TypeScript, JavaScript, SQL · Next.js, React, React Native, FastAPI, Node.js, Streamlit, Tailwind

ML / Computer Vision: PyTorch, TensorFlow, OpenCV, YOLO v8, NumPy, Pandas, scikit-learn, NLP

Automation & Integrations: n8n, Make, Zapier, Webhooks, REST APIs, SEO & Sales-Lead Automation, CRM/Marketing Tool Integrations

Data & DevOps: MySQL, PostgreSQL, Supabase, Git, GitHub Actions, CI/CD, Docker, Vercel, Netlify

AI Dev Tools: Cursor, Claude Code, Trae AI, GitHub Copilot, Bolt, v0

PROFESSIONAL EXPERIENCE

Apex AI | Remote · Part-Time Freelance | *AI Automation Developer*

Mar 2026 – Present

- Design and deploy real-time AI automations that integrate LLMs with third-party SaaS tools (CRMs, marketing, data pipelines) to eliminate manual handoffs across business processes.
- Build SEO- and sales-focused lead-generation automations that source, enrich, and qualify prospects end-to-end, driving measurable pipeline lift for client organizations.
- Ship daily-run, production-grade workflows on n8n, Make, and custom Python/TypeScript orchestrators with monitoring, retries, and eval loops for reliable operation at scale.

Sideline Technologies | Islamabad, Pakistan (On-site) | *Full-Stack AI Prompt Engineer*

Jun 2025 – Feb 2026

- Architected and shipped cross-platform mobile (iOS/Android) and web apps powered by OpenAI GPT-4 and Anthropic Claude via Cursor, Claude Code, and Trae AI — compressing delivery timelines by ~40%.
- Designed agentic LLM pipelines with structured outputs, tool/function calling, and Supabase-backed retrieval; led prompt-engineering enablement for a 5+ person team (~30% productivity gain).

ReactiveSpace | Islamabad, Pakistan (On-site) | *Prompt Engineer*

Apr 2025 – May 2025

- Built the Kani Framework Application (Next.js, TypeScript, React, Tailwind CSS) integrated with Cursor AI for rapid AI-assisted feature delivery.
- Developed an NLP-driven outbound chatbot orchestrated via prompt chains, automating client communication flows and lead qualification.

Dataventiv | United States (Remote) | *Python Developer (Intern)*

Jul 2024 – Sep 2024

- Engineered a Python Modbus simulator eliminating hardware dependency for QA (~50% test setup reduction) and built SCADA dashboards in Ignition Perspective monitoring 10+ real-time industrial data streams.

FEATURED PROJECTS

Autopilot Pro – AI-Powered Road Safety System — Python, YOLO v8, OpenCV, Deep Learning

- End-to-end driver-assistance system performing real-time traffic-sign interpretation, signal recognition, pedestrian detection, and LTV/HTV vehicle classification on live video; trained YOLO v8 on a custom-curated dataset for high-accuracy multi-class detection.

DocuChat AI – Chat with Documents (RAG) — Python, OpenAI GPT-4, LangChain, Vector Embeddings, Streamlit

- Built a Retrieval-Augmented Generation pipeline that ingests PDFs, chunks/embeds content into a vector store, and serves grounded answers with cited sources; guardrailed prompts and structured outputs minimize hallucinations.

HealthScribe AI – Clinical Note Generator (RAG + LLM) — Python, OpenAI GPT-4, RAG, LangChain, Vector Embeddings, Speech-to-Text, FastAPI, React

- LLM-powered clinical scribing app that converts patient-clinician conversations into structured SOAP notes; grounds outputs with a medical-knowledge RAG pipeline (vector embeddings + guideline retrieval) and uses Pydantic-validated structured outputs plus PHI-redaction prompt guardrails for compliant, hallucination-resistant documentation.

CASARA – Contextual Automated Security Analysis & Risk Assessment — Python, Multi-Agent LLMs, CodeQL, Semgrep, Trivy, Bandit, Gitleaks, GitHub Checks API

- Production-deployed GitHub-native PR reviewer fusing five deterministic scanners (CodeQL, Semgrep, Trivy, Bandit, Gitleaks) with a multi-agent LLM pipeline — Security, Logic, AI-Code, Privacy, and IaC specialists plus Critic + Triage agents — using scanner findings as verified grounding to cut LLM false positives.
- Ranks issues by real-world exploitability with EPSS/KEV data, computes a calibrated composite risk score, and auto-blocks high-risk merges via the GitHub Checks API; adds longitudinal developer profiling and a public 1,200-PR benchmark dataset (projected F1 0.83–0.87).

EDUCATION

Bachelor of Software Engineering · Foundation University, Islamabad

2021 – 2025 | CGPA: 3.41 / 4.0

Relevant Coursework: Machine Learning, Software Design & Architecture, Database Management Systems, Software Re-Engineering.
